IAMSATOSHI.GLOBAL IS AN OPEN SOURCE

Iamsatoshi.global Smart contract is verified on the Ethereum blockchain that is fully transparent and open source. The code is backed by the Ethereum blockchain, feel free to take a look at the divine mathematics and logic, the code is open for all to see. So, as long as the Ethereum network exists so will the Iamsatoshi.global Dapp. Every transaction is handled by a piece of un-changeable blockchain programming known as a smart-contract. Decentralized Democracy has finally arrived.

➤ **BENEFITS OF SMART CONTRACT & DAPP:**

Nobody can close your account, stop payments or make changes to the system, since the smart contract is loaded into the Ethereum network. It can't be deleted or changed.

The Iamsatoshi.global System will exist as long as the cryptocurrency exist, and the cryptocurrency will exist as long as the Internet exist.

➤ **FULL DECENTRALIZATION**

This is the System that no one controls. The human factor (including the admin factor) is completely absent. Nobody can stop, make changes to the System or to hold your funds. The open source smart contract cannot be removed from the Ethereum network.

➤ **ALL TRANSACTIONS BETWEEN PARTICIPANTS**

The administration of the project does not have access to your money, all calculations are made through a smart contract (it cannot be changed), which immediately redirects funds to the ETH wallet.

➤ **UNABLE TO STOP THE SYSTEM**

Even if the project site will cease to exist, the eternal work of the system is guaranteed by smart contract and Ethereum blockchain.

I Am Satoshi.Global

SATOSHI COIN ADVANTAGE

ABOUT SATOSHI COIN:

- Built on Ethereum ERC20 International Standard.
- Maximum Total Supply is limited to 21 Million coins (hardcoded within the Satoshi Coin Contract).
- The Total Network Value of "I Am Satoshi Global" is auto-balanced between the Satoshi Coin supply and existing Digital wallets.
- No pre-mine or pre-allotment.
- Supply of Satoshi Coin will start at 0 (zero) coins.
- As users migrate their wealth, the supply of Satoshi coins will gradually increase, avoiding dilution of network value.

SATOSHI COIN FUTURE:

- Listing on DEXs (Decentralized Exchanges).
- DEFI Applications like Lending, Borrowing, Derivatives, Payments and Asset Management.
- Staking of Satoshi Coins at attractive APR (Annual Percentage Rate), higher for longer you hold (this is additional to the Daily Interest Rate).
- Port to Ethereum Layer 2 chains like 'Matic Network' and 'OmiseGo Network' for faster and fee-less transactions on Ethereum Plasma side chains.
- Gasless transactions (without Ether) using latest innovation "Gas Station Network" on Ethereum main chain.
- Transforming current network into Satoshi DAO (Decentralized Autonomous Organization).

I Am Satoshi.Global

I AM SATOSHI GLOBAL DAPP (DECENTRALIZED APPLICATION)

WHAT ARE DECENTRALIZED APPLICATIONS:

- Dapps on Ethereum are web applications backed by Ethereum smart contracts. Instead of using a centralized server or database, these applications rely on the Blockchain as a backend for program logic and storage.
- Dapps are uncensorable by Government organizations when deployed on IPFS or other Decentralized File Systems.
- Dapps are standalone applications, which can be downloaded and run directly from your own device.

I AM SATOSHI GLOBAL DAPP ADVANTAGE

- A light-weight Web Application which runs on Desktop Browser with Metamask Extension or on other supported Dapp Browsers like Trust Wallet, Coinbase Wallet, Status Wallet, Opera Android Wallet etc.
- A single window to view and manage your Satoshi Allotments, Deposit Investments, Buy Satoshi Allotments and Sell Satoshi Coins.
- Uncensorable as a version will be deployed on IPFS (Inter Planetary File System).
- No data is sent or stored in server, as the application completely runs of user's device (Dapp Browser) and business logic on Ethereum Blockchain Smart Contracts.
